Experiment-10

FAQ's

Q1 : What is UART?
A: A serial communication protocol used to send and receive data between devices.

Q2 : Why use a circular buffer for UART?
A: It optimizes space and allows continuous data flow without memory shifting.

Q3 : What happens when the buffer is full?
A: New data is lost or should be managed until space is available.

Q4 : Is UART synchronous or asynchronous?
A: UART is asynchronous communication.

Q5 : What is baud rate?
A: The speed of data transfer, measured in bits per second (bps)
