Experiment-9

FAQ's

1. What is a tree?

Ans. A tree is a nonlinear data structure used for managing hierarchical data.

2. What is a binary tree?

Ans. A binary tree is either an empty tree, or a finite set of nodes consisting of a root and two disjoint binary trees called the left subtree and the right subtree.

3. What are the types of binary trees?

Ans.

- Complete binary tree
- Full binary tree
- Binary search tree
- Skewed binary tree
- Threaded binary tree
- etc.

4. What are tree traversal techniques?

Ans.

1. Recursive
2. Non-recursive

5. What are recursive tree traversal techniques?

Ans.

1. Inorder
2. Preorder
3. Postorder

6. What are AVL trees?

Ans. AVL trees are height-balanced binary search trees.

7. What are the basic operations that can be performed on trees?

Ans.

1. Create
2. Search
3. Traversal
4. etc.

8. Explain the terms degree and height of a tree.

Ans.

- Degree of a tree: The number of subtrees of a node is called its degree.
- Height (or depth) of a tree: The maximum level of any node in the tree.

9. Draw representation of tree using Linked List and array.

Ans.
